Novo u HL-u

HL161 Procjedni element za HL62, HL63, HL64 i HL69 seriju

Product description

U mnogim slučajevima može biti nužno ili postoji zahtjev za tanjom krovnom konstrukcijom za procjednu ili površinsku vodu između hidroizolacije i parne brane.

Sada je to moguće postići korištenjem procjednog elementa HL161. Ring odvodi vodu sa površine hidroizolacije direktno u odvodnu vertikalnu i sprječava prodor vode u termo izolaciju. The included ring leads the drainage water from the upper water proofing level directly into the drain and avoids the seeping of water into the thermal insulation. HL161 is delivered as a set, consisting of a ring and the drainage element.

Attitudes:

- **Size:** Ø170/127 x 60
- **Material:** PP Polypropylen
- **Package:** In PE bag
- **Weight:** 134 Gramm
- **EAN-Code:** 9003076034772
- **Price:** see price list
