

Shower channel WALL Standard

HL053WS/90(100)(120) with wallside angle

For drain bodies HL53K(F), HL53KV(C), HL53K(F)C

Product description

Our product series HL53 has been extended by a new article: **HL053WS** (Wall Standard) with wallside angle and integrated cross slope.

This version with wall-side angle may only be installed close to the wall, but offers some advantages:

- By having a metal angle between floor and wall it is no longer necessary, to have a silicone joint in the sensitive area (edge and corner), which is mostly covered with water. That avoids mould growth!
- The 2cm angle enables, to lay the tiles in one row all over the whole bathroom.
- Available in 3 length 90 cm, 100 cm und 120 cm, as standard version. As usual the cover may be cut to the right length.

This shower channel fits for floor tiles 12mm – 32mm und wall tiles 12mm – 24mm incl. glue and is set on the waterproofing by a normal tile glue. It is delivered with a self-adhesive tape for sound disconnection, which should be taped at the backside of the angle.

Available length: 90cm, 100cm and 120cm

- Installation only wall-side
- Stainless steel V2A = 1.4301 = AISI 304
- Load classification: K3 – max. 300 kg
- Integrated cross slope
- Minimum cuttable to 45cm.
- Adjustable plastic frame pre-mounted.
